

# Introduction to the new webshop

# Introduction to the new LF webshop

We were the first company in our sector to design an internet shop and for this reason, LF is proud to introduce its new, completely refurbished platform at the HOST 2015 exhibition in Milan.

A peculiar feature of this new website is undoubtedly the user area, which has been designed using the latest web technology. With it, we can confirm that three objectives have been reached:

- 1 **New graphics**, in line with the new website, more appealing to the eye and therefore easier to read;
- 2 **More user friendly**, thanks to the simplification of some functions and the complete redesign of others;
- 3 Browsing made simpler and easier on **mobile devices**, thanks to its full-responsive technology, which makes the private area easy to use also with a mobile phone (like the new website).

With the publishing of the new internet shop, LF confirms its leading position also in the use of new technology!

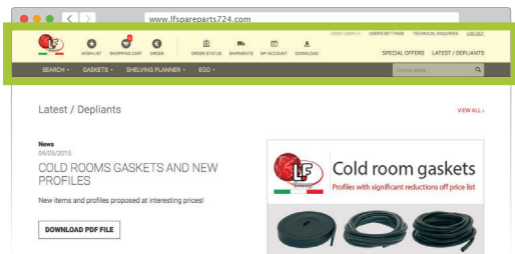

This does not mean that we have disregarded the previous functionality! All the functions that were already present have been maintained and in the new B2B you will still be able to find these features.

A short guide to the new user area follows.

All the pages of the user area can be browsed by scrolling up and down, using the scroll bar on the side or by using the scroller which is found on your mouse. By doing so, you will be able to browse the different sections on the home page and view the current special offers, news, latest publications, promoted items and other useful information.

Please note: when you connect from a tablet or a mobile phone numerous pages can be browsed by scrolling sideways (the "panning" function). Don't forget to try it!

In the upper part of the page, you will find the **selection panel** and the main order functions are positioned here:

On the left side, you can see all the ordering, cart and wish list functions, which can be used as a prompt or reminder. On the right, the menu will allow you to search orders placed, their shipping details, your account information and view the download function. Underneath the control panel, we have placed all the search functions, which are the core of LF's website!

**PLEASE NOTE: the control panel and the search menu bar are fixed and available on all pages of the website.**

Inside the 4 menus (Search, Gaskets, Shelving, EGO) the functions are the same as previously seen and in some cases they are even simpler:

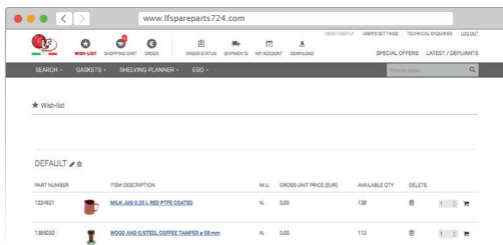

Please note: as you certainly will have noticed, the quick search bar is always available, in each page, on top right of the screen. We have chosen this feature to allow you to gain time and have the search tool always available, in all menus, without having to interrupting what you are doing.

# The top **10** improvements to the new user area LF webshop.

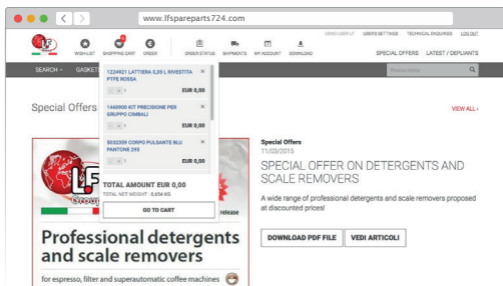

## 01.

You are now able to **change an existing wish list**. You can amend the name of an existing list without having to create a new one:

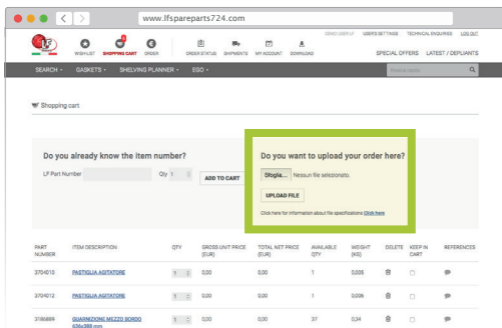

## 02.

We have introduced the **disappearing cart**: every time you add an item to your order or simply pass your mouse on the icon, the shopping cart pops up briefly to show the latest updates / additions. (Note: now the cart has the push-buttons to change the quantities in your order).

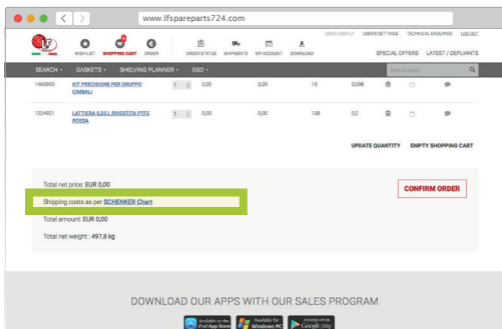

### 03.

We have introduced the **order upload** straight in the cart window:

### 04.

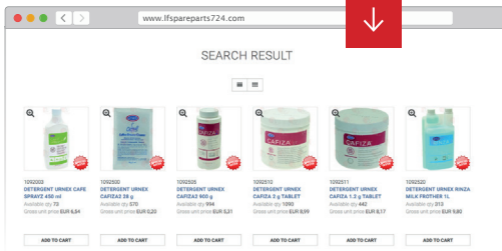

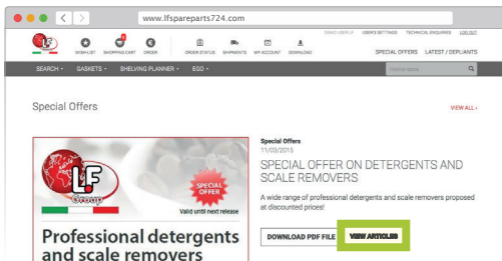

We have made the **Schenker table** visible (for shipping abroad exceeding 50 kg) directly on the order, before confirmation:

The whole website has been designed using a full-responsive technology, which makes browsing simpler and easier on mobile devices.

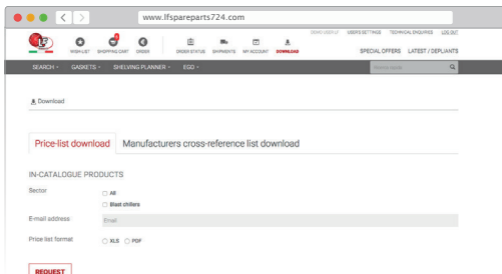

## 05.

It is now possible to view the **details of items** contained in the flyers published in the “window” of the home page:

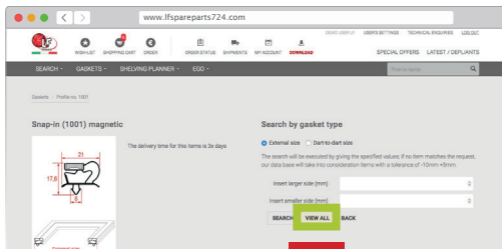

## 06.

We have made the **download page** more user friendly and easier for reading:

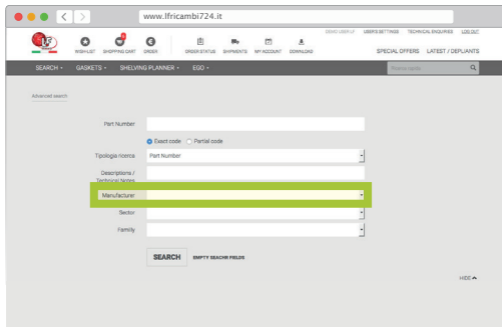

## 07.

In the gasket search, we have added the “see all” facility which enables you, once the required profile has been selected, to view all the available gaskets of that kind:

## 08.

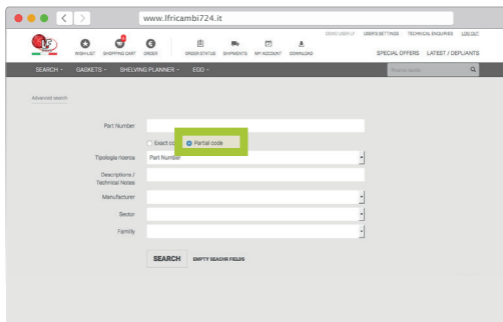

In the advanced search, both the search by LF code and the one by manufacturer code are featured:

## 09.

Also in the advanced search, we have made available the function to **search by contained code** (this was previously only available in the search by manufacturer code):
